Incremental Growth in Global Natural Production Since 2010, Year on Year

Analysis Based on EIA, JODI, and BP Data

EPRINC

From the rise of the Shale Revolution in 2010, until the onset of COVID-19 in 2020, the United States accounted for over 45% of the incremental global natural gas production growth.

Incremental Growth in Global Natural Gas Production Since 2010

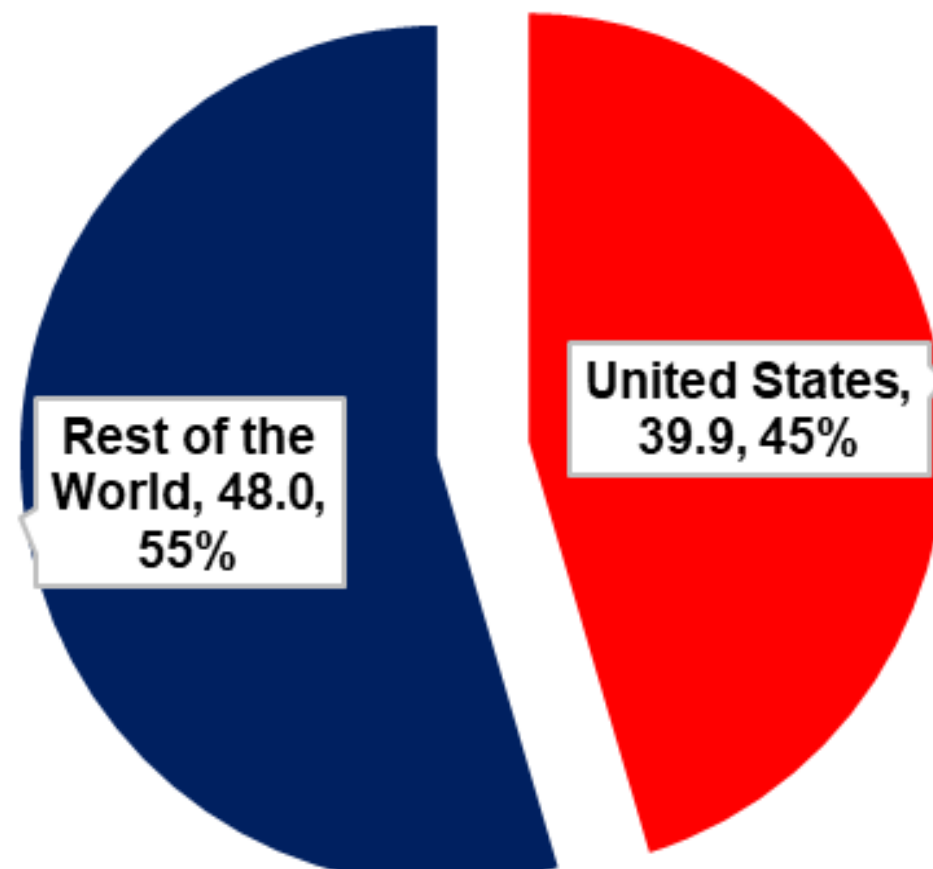

- 2019 global natural gas was reported at almost 380 billion cubic feet per day (BCF/d), up from 302 BCF/d in 2010.
- Of the almost 80 BCF/d of incremental growth, the U.S. accounted for over 45% of the expansion.
- In the absence of that, natural gas prices would likely be much higher in the current tight markets.
- While natural gas demand growth is recovering, some U.S. policymakers are attempting to constrain the expansion of U.S. supply.
- The expanded version of this slide deck is available at: <https://eprinc.org/chart-of-the-week/>
