Illinois CO₂ Emissions From Electricity Generation

2019 Illinois State CO2 Emissions from Electricity Production		
	Million Metric Tons	Percentage of Global CO ₂
Coal	48.81	0.00%
Natural Gas	9.34	0.00%
	58.1	0.00%

Illinois CO₂ Emissions from Electricity Production

- **The Illinois Energy Transition Act was signed into law in September 2021. It mandates that almost all commercially-owned coal-fired electricity-producing plants are free from CO₂ emissions by 2030. If they are unable to comply, they are required to be shut down.**
- **Municipally-owned coal-fired plants and commercially-owned natural-gas plants, along with several commercial coal-fired plants named in the Act that had recently been recently commissioned, have until 2045 to comply.**
- **In 2022, Illinois generated a total of 190 million megawatt hours of electricity. Emissions-producing coal and natural gas generation accounted for 21.5% and 12.8% of total generation, respectively. Since 2014, coal generation has declined from 43.5% of total while natural gas has risen from 5.1%.**
- **In this same period (2014-2022) emissions-free nuclear generation has ranged from 48% to 52% while solar and wind generation, combined, rose from 5.1% to 13.6%.**
- ***continuing ...***

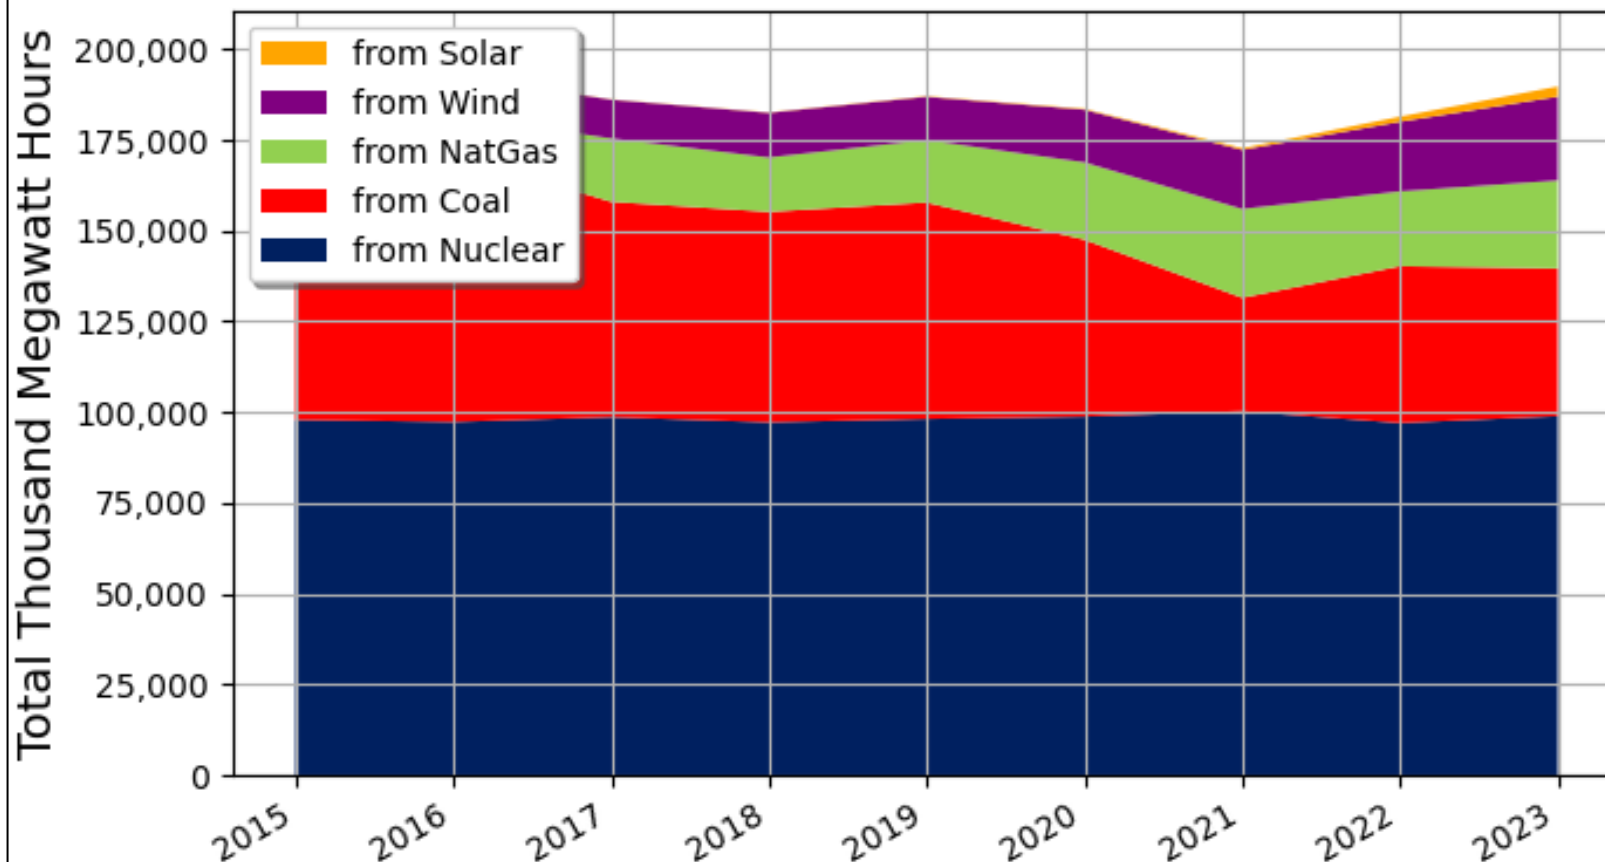

Illinois CO₂ Emissions from Electricity Production

- The earth's atmosphere contains 2.1 trillion metric tons of CO₂, comprising 0.041% of the aggregate 5.15 quadrillion metric tons.
- Global CO₂ emissions from hydrocarbon fuel use are 36.4 billion metric tons per year. Of this, about 45%, or 16.4 billion tons, remains in the atmosphere, a contribution of 0.8% to the total 2.1 trillion tons.
- U.S. CO₂ emissions are 5.2 billion metric tons, or 14% of total emissions.
- In 2019, Illinois CO₂ emissions from fuel combustion were 203.4 million metric tons, 3.9% and 0.55% of the U.S. and global total, respectively. Of this, Illinois' electricity generation emitted 58.2 million tons, or 1.1% of the U.S. and 0.15% of global, primarily from coal generation.
- The Illinois Energy Transition Act seeks to affect global CO₂ emissions through actions within its relatively small jurisdiction and emissions profile, an approach that is costly to Illinois with little prospect for impact on the U.S. or global total.

Illinois Annual Electricity Production: 01/01/2014 to 12/31/2022

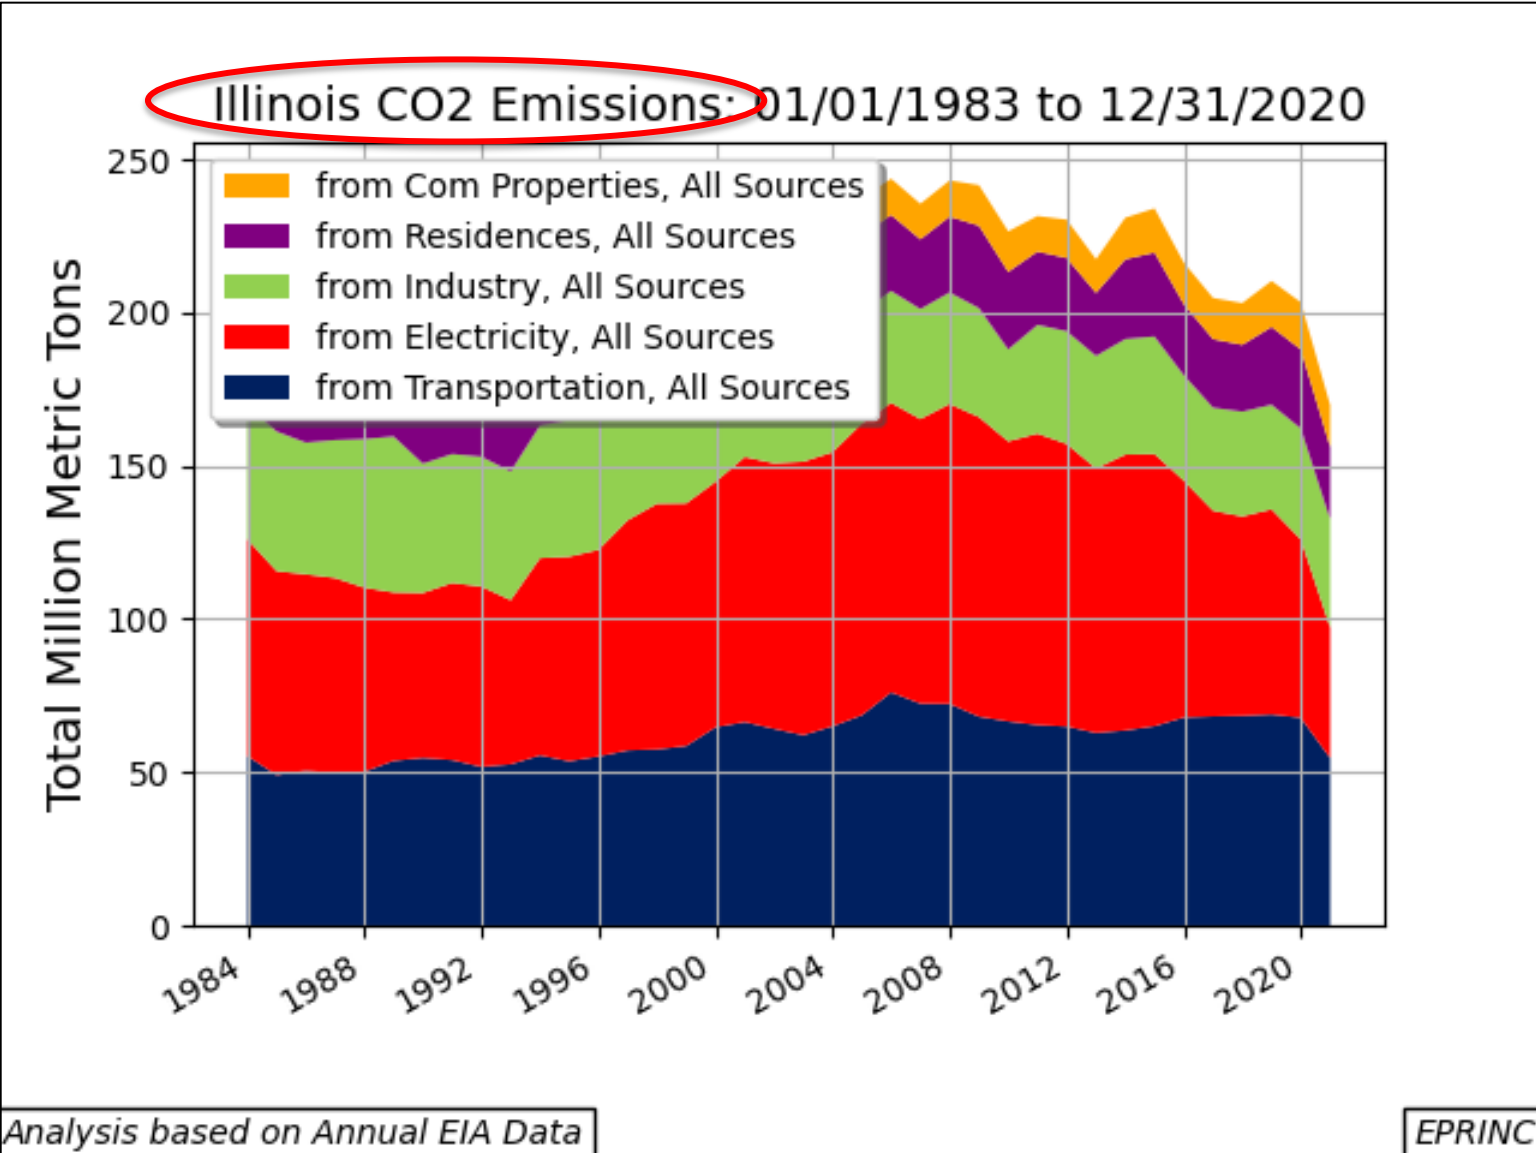

Analysis based on Annual EIA Data

@EPRINC_DC - Mar 27, 2023

2022 Illinois Electricity Production		
	Million Megawatt Hours	Percent
Nuclear	98,870	52.1%
Coal	40,711	21.5%
Natural Gas	24,260	12.8%
Wind	23,063	12.2%
Solar	2,823	1.5%
	189,727	

Illinois CO₂ Emissions From All Fuels by Sector

2019 Illinois State CO ₂ Emissions by Sector		
	Million Metric Tons	Percentage of Global CO ₂
Com	15.4	0.00%
Res	25.7	0.00%
Electricity	58.2	0.00%
Transportation	67.8	0.00%
Industry	36.3	0.00%
	203.4	0.01%
